Summary

I am a Full Stack developer with a vast array of knowledge in many di erent front end and back end languages, responsive frameworks, databases, and best code practices. My objective is simply to be the best web developer that I can be and to contribute to the technology industry all that I know and can do. I am dedicated to perfecting my craft by learning from more seasoned developers, remaining humble, and continuously making strides to learn all that I can about development. While a student at both Georgia Southern and Georgia State Universities, I studied Mathematics, and I believe that my understanding of problem solving and complex algorithms are also skills that have and will continue to contribute to my overall success as a developer

School Management.

Schoul Management System is the system that manages students, teachers, classes, subjects, and many more. Here, the user can use the features of CRUD and manage students, teachers, subjects, and classes. Now talking about all the main functions of the system that is the feature. to add, edit, delete, and view students, teachers, and classes, While adding a student, the user must provide full name, select gender, date of birth, select class, enrullment date, and parent's phone numbers. Additionally, students, teachers, classes, and subjects all have a unique and autogenerated number. This sort of system may be used by middle and high schouls to handle information in a methodical manner.

⊲: Publications

Database Migration for Orders Table

Created and ran database migrations for the orders table with elds for order ID, user ID, product details, and timestamps.

Frontend Design for User Dashboard

Designed and implemented the frontend interface for the user dashboard using Bootstrap and Blade templates.

User Authentication Module Development

Developed user authentication module using Laravel's built-in authentication system.
